

Initial Assessment

How healthy is your network?

Most companies are unaware of the status of their existing computers and networks. Our initial network assessment helps you to identify the current status of your computer environment. After completing the assessment, information gathered will be documented and presented in a reader friendly format. Observation and recommendations will be discussed to help in providing solutions (long term and short term) for you environment.

The initial Assessment includes:

- **Network survey-** Verify cabling, computer location etc
- **Documentation and evaluation of existing hardware-** Servers, computers, printers etc
- **Network security scan-** Internal/External
- **Evaluate existing network procedures-** Disaster recovery, antivirus etc
- **Document current ISP information**
- **Create a network diagram**
- **Presentation of assessment to customer**
- **Discuss observations and recommendations**
